

SentryFile Connector for AutoStore / KyoCapture

Installation Instructions

1. Make sure your computer has the .NET framework 2.0 installed on it. If not, download and install it from:
 - <http://www.microsoft.com/downloads/details.aspx?FamilyID=0856EACB-4362-4B0D-8EDD-AAB15C5E04F5&displaylang=en>
2. Unzip all the files contained in the ZIP file (attached) to the appropriate folder:
 - AutoStore: C:\Program Files\NSi\AutoStore
 - KyoCapture: C:\Program Files\Kyocera\KYOCapture
3. Open the C:\Program Files\NSi\AutoStore folder (for AutoStore) OR C:\Program Files\Kyocera\KYOCapture folder (for KyoCapture) and double-click the "Register.bat" file. A dos prompt will appear briefly then close. This should register the connection in the Windows registry and associate it with AutoStore/KyoCapture.

Quick Start

1. Open AutoStore/KyoCapture, create a new process (e.g. add an MFP, some process controls etc).
2. Add a SentryFile Document Management Route object.
3. Create a form on your MFP, add some fields.
4. Edit the properties of the SentryFile Document Management object. A dialog will appear asking you for the URL (e.g. <http://192.168.1.1/SentryFile/>) username (e.g. Admin) and password (e.g. Admin) for your SentryFile server.
5. Click "Connect". The connector will communicate with your SentryFile Server and display a list of cabinets.
6. Choose the destination Cabinet that you'd like to use.
7. A list of the fields will be displayed. You need to drag RRT's (from your MFP Form) into the Field Value column for the corresponding Cabinet field. (Please note, the Drag and drop is a bit touchy... You may need to click the "Field Value" column to activate it, then drag the RRT into it.)
8. Run the job.
